

ELVIS ANTWI APPIAH

SOFTWARE ENGINEER

(+233) 55 773-3032 | Accra, Ghana | www.elvisappiah.vercel.app | kageappiah@outlook.com

A software engineer passionate about web development and exploring new productivity techniques and workflows. I focus on meeting client needs and am dedicated to finding solutions collaboratively. I thrive on programming challenges that enhance my software engineering skills. I excel in team collaboration, effectively communicating within group settings. Constantly thinking about code, I am dedicated to fostering a sense of community within the tech space.

AREA OF EXPERTISE

Vue.js / Nuxt.js	Web Design	Technical SEO
React / Next.js	Testing & Debugging	PHP & Laravel
Typescript & Javascript	Sass & Tailwind CSS	MySQL & Firebase

PROFESSIONAL EXPERIENCE

Software Engineer, RIGELIS. INC

Aug 2023 - Apr 2024

- Key member of the development team that designed and built a proprietary software solution (created with Vue.js) supporting over 97 pharmacies and their retail chain. This system streamlines day-to-day pharmaceutical transactions, inventory management, and operational workflows across their network of locations.
- Solely created the company's current pharmacy website (built with Vue.js) and integrated an innovative referral/request system feature, as well as a database for this operation with firebase.
- This referral system enables pharmacies, hospitals, labs, and individuals to refer customers for lab testing and other services. I also, built a comprehensive custom application (created with Vue.js) to provide seamless access and monitoring capabilities for the company's clients database.

Software Engineer, MOTES SYSTEM

Dec 2022 - Jun 2023

- Frontend Engineer Key member of the team that developed the initial working version of the voting system, using React & Node.js , and that system is being used across the country by several reputable companies, universities, and other government institutions.

EDUCATION

BACHELOR OF SCIENCE

2019-2023

University of Ghana

- Majors: Economics
- Minors: Computer Science & Mathematics

RECENT PROJECT

Regentems

www.regentems.vercel.app

An employee management portal that allows employees to make requests like sick leave, maternity, annual leave, and can be expanded or modified for more. This was built with Nuxt 3, Firebase(realtime database, authentication, storage, cloud functions), and Tailwind Css.
